Welcome to Bluebonnet Electric Cooperative

Bluebonnet Electric Cooperative Inc. was incorporated in 1939 as the Lower Colorado River Electric Cooperative. The name of the Cooperative was changed to Bluebonnet Electric Cooperative, Inc. in 1964, to enhance a separate identity from the Lower Colorado River Authority (LCRA).

Bluebonnet serves all or part of 14 counties, covers over 3,800 square miles and serves more than 120,000 meters. Bluebonnet operates five retail centers: Bastrop, Brenham, Lockhart, Giddings and Manor. Bluebonnet is one of the largest electric cooperatives in Texas. A distribution cooperative, Bluebonnet purchases most of its power wholesale from the LCRA. Bluebonnet operates and maintains approximately 12,000 miles of distribution lines. Bluebonnet owns 26 substations and purchases power at 22 additional substations owned by the LCRA.

Bluebonnet provides this packet to all developers and their agents and it should be used as a guide in planning the installation of electrical equipment for receiving electrical power from the distribution system of Bluebonnet.

The information presented is subject to change and will be revised periodically to reflect any changes which may develop. Please refer to our website at bluebonnet.coop for any additional information as well as an online source of this packet.

Thank you. We look forward to working with you as your electrical provider.

REQUESTED ELECTRICAL SERVICE **Service/Project Name:**_____

PRIMARY SERVICE

☐ Overhead

☐ Underground

SECONDARY SERVICE

☐ Overhead

☐ Underground

REQUESTED VOLTAGE

☐ 120/240 - 1ø 3 Wire

☐ 240/480 - 1ø 3 Wire

- Single-phase transformers are limited to (1) 100 kVA transformer per overhead service & (1) 167 kVA pad mount transformer per underground service.

☐ 208/120 - 3ø 4 Wire Wye

☐ 480/277 - 3ø 4 Wire Wye

☐ 240/120 - 3ø 4 WIRE DELTA (O/H banks only)

☐ 480 - 3ø 3 WIRE DELTA (O/H Banks Only Corner Grounded)

- Three-phase transformers are limited to (3) 100 kVA transformer per overhead service

☐ Primary Voltage 12.47/7.2kV or 24.9/14.4kV

MAIN DISCONNECT (AMPERES) New _____ Existing (If Any) _____

Total connected load in Amps (Should Match Page 2 Total). _____

SECONDARY SERVICE ENTRANCE CONDUCTORS

☐ **Copper Wire** ☐ **Aluminum Wire**

Wire Size _____ Quantity_____ per phase Quantity _____ for the neutral

- Each Phase MUST be sized to accommodate the TOTAL DISCONNECT SIZE or FUSE/BREAKER installed.
- Commercial service MUST pull in a full size neutral whether it will be used or not.

SECONDARY SERVICE ENTRANCE CONDUIT

Size of Conduit _____ in. Quantity of Conduit _____

Rev. March 2, 2023

Building Size: _____SQ.FT.

Hours of operation: _____ **Days of the week:** _____

Motors (Other Than Air Conditioning)

- Motors or motor loads totaling more than 25 HP, may require soft starters or VFD's(Variable Frequency Drives) and/or 3 Phase Service. VFD's will require appropriate filtering. Please Contact Bluebonnet Electric's Engineering Department for further information.

Developer's Checklist

Responsibility of Developer:

- ☐ Developer must fill out a Development Information Request Form and submit to Bluebonnet along with design fee if required.
- ☐ Developer is responsible for confirming all Bluebonnet easement requirements with Bluebonnet prior to platting.
- ☐ Developer must have an engineering firm submit preliminary plan of development in digital (AutoCAD) format to Bluebonnet Engineering Department. These plans must include streets, wet utilities, and grading plans as well as any other utilities planned for said development. BBEC will not accept removable media devices for file submissions. For files that are too large to send via email, a BBEC FTP Site will be provided.
- ☐ A design/re-design fee of $50/hr. could be required either prior to or following the design process. This decision will be made at the discretion of Bluebonnet on a case by case basis. These fees are non-refundable and are subject to revision at Bluebonnet's discretion.
- ☐ Prior to Bluebonnet construction, two (2) hard copies of the approved plat must be submitted.
- ☐ Developer must provide and install all underground conduits at road crossings in the designated locations per Bluebonnet Crossing Plans, and if applicable, all electrical conduits in designated locations per Bluebonnet Construction Plans. See Bluebonnet Specifications. **If project design includes overhead primary lines and transformers in conjunction with underground meter pedestals, Developer may install road crossings ONLY. Bluebonnet contractors shall complete installation from road crossings to point of termination and this labor and material will be figured into the respective Contribution In Aid of Construction (CIAC).**
- ☐ Developer is responsible for following Bluebonnet inspection policies and procedures prior to and during conduit installation if using his own contractor (see Page 8).
- ☐ Property pins must be set and clearly visible at all property corners, at developer's expense, prior to Bluebonnet commencing construction.
- ☐ Developer is responsible for submitting contribution-in-aid of construction (CIAC) to cover Bluebonnet's construction costs prior to Bluebonnet commencing construction. Bluebonnet department will contact developer to communicate planned construction start date and duration following project being released for scheduling.
- ☐ Developer is responsible for all right-of-way clearing and grubbing to Bluebonnet specifications. Bluebonnet will clear the right-of-way for proposed overhead facilities for an additional charge. See Bluebonnet Specifications.
- ☐ Developer is responsible for ensuring conduit contractor and/or subcontractor adherence to all Bluebonnet Construction Specifications at all times.
- ☐ Developer is to provide ALL materials necessary for the conduit system he installs for his Bluebonnet Underground System. Bluebonnet will own these materials after proper installation is certified by a Bluebonnet Inspector.

Developer's Fees and Information

Development Fees

1. A design/re-design fee of $50/hr. could be required either prior to or following the design process. This decision will be made at the discretion of Bluebonnet on a case by case basis. These fees are non-refundable and are subject to revision at Bluebonnet's discretion.

2. Every request for design and every alteration to all initial requests for design services may be considered as an individual request and, therefore are subject to additional fees to be determined by Bluebonnet.

3. When the developer or prospective developer enters into a line extension agreement with Bluebonnet for service, monies received for engineering design estimates of service will be applied to the cost of construction. Bluebonnet's Line Extension Policy can be found in the enclosed Member Handbook or on the "Residential Development" link on our website at www.bluebonnetelectric.coop

4. If the developer or prospective developer does not notify Bluebonnet within a 180 day period of initial design with the intent to proceed, then any design fees paid to date will be forfeited and the prospective project will be treated as new.

5. A maintenance fee of $1 per linear foot of trench will be required at the time of contribution by the developer to cover the cost of any necessary repairs in the first year following the completion of Bluebonnet facilities installation.

Additional Notes

Underground electrical lines in residential developments (including apartment complexes and any commercial service) shall be looped to accommodate the ability to feed from two or more directions so that in the event of an outage the most number of customers can be provided power until the failed line or equipment is restored. Avoid looping back in the same ditch. Never loop back to the same riser pole, sectionalizing cabinet, or switchgear.

Where three-phase is used to provide single-phase service to individual occupants, the load must be balanced between all three phases as equally as possible. This applies whether the single phase services are individually metered or not.

Fire Pumps

Electric service to fire pumps shall be served through a CT-metered service.

Easements / Right-of-Way

1. Bluebonnet shall be granted, at no cost and in writing suitable for recording, all rights-of-way and easements necessary to serve member, overhead or underground for the erection, maintenance, repair, replacement, removal or use of all wires, poles, machinery, fixtures, or equipment needed to supply and deliver electric service to the member.

2. A signed easement granted to Bluebonnet will be required before construction will commence. Once Bluebonnet facilities are installed, the easement will adhere to the facilities, from the installation point with a 15 foot easement on each side of the centerline (30 feet of easement) of overhead facilities and 20 foot easement (10 feet on each side of the centerline), for underground facilities.

3. Only Bluebonnet equipment or material is allowed to be attached to Bluebonnet property, except where said equipment and/or materials is required to provide electrical service and said equipment and/or material has been authorized by Bluebonnet.

4. Please note that Bluebonnet facilities must be installed in easements that are exclusive to Bluebonnet with no other utilities being allowed in these easements except for buried crossings.

Location of Facilities

All overhead or underground distribution lines and equipment will be located in an area that is easily accessible by Bluebonnet vehicles and personnel.

To prioritize safety for first responders and Bluebonnet Electric Cooperative, Inc.'s (BBEC) service men, the main electrical disconnect for each electrical service shall be installed in a readily accessible outdoor location no more than 100 feet from the transformation site. BBEC's Engineering Department must approve the electrical disconnect location before a design estimate will be provided.

Developer Installed Conduit Guidelines and Procedures

1. Developer will review Bluebonnet's construction specifications prior to trenching and conduit installation (specifications included in this document). Developer is encouraged to contact Bluebonnet inspector listed in #3 below with any questions.

2. Developer must provide and install all underground material in the designated locations per Bluebonnet's design. Bluebonnet will provide and install the associated hardware such as sectionalizers and transformers that will be located above ground.

3. Developer will contact the Bluebonnet Project Coordinator when conduit and stub-ups are installed prior to filling the ditch (open ditch inspection). Bluebonnet will respond within 48 hours of notification. Please choose from the list of Bluebonnet Project Coordinators to schedule an inspection.

   - **Project Coordinator Rodney Gerik, may be reached at (979) 540-8814 (cell), or at rodney.gerik@bluebonnet.coop.**
   - **Project Coordinator Shawn Ely, may be reached at (979) 540-7361 (cell), or at shawn.ely@bluebonnet.coop.**
   - **Project Coordinator Dalton Voight, may be reached at (512) 629-3771 (cell), or at dalton.voight@bluebonnet.coop**
   - **Project Coordinator Shane Mathison, may be reached at (979) 542-8540, or at shane.mathison@bluebonnet.coop.**
   - **Project Coordinator Jorge Varillas, may be reached at (512) 764-2838, or at Jorge.Varillas@bluebonnet.coop.**
   - **Project Coordinator Scott Iselt, may be reached at (979) 542-8522, or at Scott.Iselt@bluebonnet.coop.**
   - **Project Coordinator Wyatt Rosenauer, may be reached at (512) 332-8665, or at Wyatt.Rosenauer@bluebonnet.coop.**

4. Trenches will remain open until inspected and approved by the Bluebonnet inspector. Upon inspection, developer will be advised as to what may or may not be backfilled.

5. Bluebonnet retains the right to terminate any conduit installation if inspection reveals non-compliance with Bluebonnet inspection policies, procedures, or specifications until said issues are resolved and approved through re-inspection.

5. Equipment location and conduit stubs must meet clearance requirements on all sides as outlined in Bluebonnet Specifications.

6. Developer or his/her contractor is responsible for acquiring any and all permits and remitting any necessary fees for trench and conduit installation (excavation plans, traffic control plans, digging permits, etc.)

Developer's Checklist

Responsibility of Developer:

- ☐ Developer is responsible for confirming all easement requirements with Bluebonnet prior to installation.
- ☐ Developer is responsible for following Bluebonnet's inspection policies and procedures prior to and during conduit installation.
- ☐ Developer is responsible for all right-of-way clearing or grubbing to Bluebonnet's specifications.
- ☐ Developer is responsible for adherence to all Bluebonnet's Construction Specifications.

Developer's Fees and Information

1. Every request for alteration to initial requests for design services are subject to additional fees to be determined by Bluebonnet.
2. Bluebonnet's Line Extension Policy can be found in the Member Handbook.
3. A maintenance fee of $1 per linear foot of trench will be required at the time of contribution by the member to cover the cost of any necessary repairs in the first year following the completion of Bluebonnet's underground facilities installation.
4. Cost estimate given to developer will be good for **60** days.

MEMBER RESPONSIBILITY		BLUEBONNET RESPONSIBILITY
Deliver essential project documents to Bluebonnet Electric Coop. **- Site plan files (CAD Format), load information, information request form(s), project schedule.**	**BEFORE THE CLOCK STARTS**	Facilitate correspondence with member/developer to discuss needs and review available information.
		Provide Bluebonnet Developer's Package (Commercial/ Residential); including standard Bluebonnet Easement.
		Collect information from Member/Developer.
		Verify a complete member package has been received, including all required documentation.
Host a site visit and/or Pre-design Meeting/Call with Bluebonnet Representative(s). **Provide up to date and accurate Project Schedule for all stages, including desired energization date.**	**WEEK #1**	Attend site visit or Pre-design meeting, evaluate site layout, utility coordination, member construction coordination, jobsite construction access, etc.
****Bluebonnet Electric cannot begin design of project until all required documentation is received.****	**WEEKS #2-#5**	Design electric service layout; coordinate with the electric system (circuit capacity, fuses). Size equipment, determine rate class for Community Representative to communicate to Member.
	WEEKS #6-#7	Prepare and submit any necessary permits. Schedule and complete field staking of project. Finalize and secure all easements.
	WEEK #8	Create cost estimate and deposit and send cost letter and Site Ready Letter to developer.
Expedite payment to Bluebonnet Electric for project. **Provide any required third party easements and outstanding information.**	**WEEK #9**	
****Bluebonnet Electric will not release project for scheduling (apartments and subdivisions) until addressing information is received.****	**WEEKS #10-#11**	Process project payment.
	WEEK #12	Prepare for and release project to construction. Verify material availability and receipt of developer's Site Ready Letter.
****Bluebonnet Electric cannot begin construction of project until Site Ready documentation is received.****	**WEEKS #13-#28**	Upon release, Construction Lead (Contract Coordinator or Bluebonnet Construction) will contact member within two business days to provide anticipated construction start date, duration, planned completion, etc.
Construction crews will leave the site if suitable construction conditions are unsatisfactory.		
Member completes preparation for final electric service delivery.		Request crew scheduling from construction. Complete inspections and accept installations. Verify site is prepared and ready for construction.
		Construct Bluebonnet Electric Facilities.
Member requests initiation of final electric service.	**WEEKS #29-#30**	Inspect final installation. Energize project and initiate electric service.

A. If a Member step is late, the project clock **STOPS**. Members/Developers are highly encouraged to stay on top of payments, required easements, and all crucial deliverables and documentation.
B. Elapsed times are not a guarantee. More than thirty weeks may be needed for larger scope projects or projects that require significant upgrades to Bluebonnet Electric's system infrastructure.
C. Member/Developer is required to provide Bluebonnet Electric with any and all required easements, including third party, prior to commencing construction.
D. Bluebonnet Engineering staff are responsible for all steps from project inception through Week #12. Weeks #13 - #30 are managed by Bluebonnet Construction Staff and are denoted in **BLUE**.
E. Permitting schedule is contingent on regulatory agency approval (response times vary).
F. Member/Developer is required to notify construction once site is ready by returning a signed Site Ready Letter. **Projects will not be released for scheduling until this document has been returned.**

During the **planning, engineering, and design phase** of your project your main point of contact will be one of Bluebonnet's Project Coordinators. If the Project Coordinator for your project is not available, one of the other team members will be glad to assist you.

Metering Guidelines

Latest Update to all specs can be found at **Bluebonnetelectric.coop**

For the member's safety, wiring installation and material shall conform to the requirements of the NEC, TDLR and NESC. All Wiring Installations must also meet local guidelines, if applicable, set forth but the city, county, or other governing entity in the event these requirements are more stringent than Bluebonnet specifications.

General Notes

Applicable to All Specs

1. Weatherproof fittings are required for all connections.
2. The main electrical disconnect for each electrical service, if not mounted on a Bluebonnet pole or on an approved rack, shall be unenclosed and installed on the exterior of the building or approved structure in a location approved by Bluebonnet Electric Cooperative
3. Meter assembly must remain unenclosed on the exterior of a structure.
4. Meter assembly cannot be mounted on a mobile home.
5. Any part of a meter rack or equipment rack shall be a minimum of six feet from Bluebonnet poles or equipment, and shall not impede access for maintenance to Bluebonnet's poles or equipment.
6. Bluebonnet poles must remain free of structures and private attachments other than the meter loop/meter loop riser assembly.
7. Meter loops or risers shall be installed on pole by Bluebonnet.
8. All secondary connections are to be made by Bluebonnet.
9. Neutral(s) must be insulated and may only be reduced two sizes on residential applications. No reduction of the neutral(s) is allowed on commercial applications.
10. Each phase must be sized to accommodate the total main fuses or breakers installed
11. Electric service to fire pumps shall be served through a CT-metered service.
12. Where three-phase is used to provide single-phase service to individual occupants, the load must be balanced between all three phases as equally as possible. This applies whether the single phase services are individually metered or not.
13. For all jobs requiring excavation, including rack or underground, the individual or contractor performing the work shall call TEXAS811 for locating jobs before digging to Bluebonnet equipment. No private utilities will be located.
14. Mobile Home Feeder Cables may not be used from Transformer or UJB to Meter unless the fourth (Green or Bare) Ground wire can be and is removed before installing.

CT Metering Notes

Applies to: MS-112B1, MS-112B3, MS-113B1, MS-113B3, MS-114A1, MS-114B3, MS-115-1, MS-115-3, MS-202A1, MS-202B3, MS-204B1, MS-204B2, MS-204B3, MS-207B, MS-301B, MS-301C, MS-406A, MS-533-1, MS-533-3, MS-554-1, MS-554-3

1. CT Enclosures may be purchased from Techline **(512-332-2978)** and Installed by Member:
   Minimum Size 1 Phase: Main Enclosure 30” x 30” x 12”
   Backup Enclosure 24” x 30” x 13”
   Minimum Size 3 Phase: Main Enclosure 42” x 30” x 13”
   Backup Enclosure 24” x 30” x 13”
2. CT enclosures may be purchased at any supplier as long as it meets the minimum dimensions and is able to accommodate a Bluebonnet pad lock.
3. Bluebonnet to provide CTs.
4. The electrical contractor will notify Bluebonnet 72 hours in advance to schedule Bluebonnet personnel to deliver the CT’s. The electrician shall install the CT’s on the rack with the correct polarity before the conductor is brought through the CT enclosure. Call **(800-842-7708)** to schedule a connect.
5. Electric service to fire pumps shall be served through a CT-metered service.

Standby Generator Notes

Applies to: MS-400, MS-401, MS-401A, MS-402, MS-402A, MS-403, MS-404, MS-405, MS-406, MS-406A, MS-407, MS-408, MS-412

1. Generators shall be placed a minimum of 15’ away from Bluebonnet’s pole(s) and/or equipment and outside of Bluebonnet’s easement.
2. Transfer switches may be on Bluebonnet pole, only if they are in place of a main panel. They may not be in addition to a panel.
3. Any transfer switch that serves as a main (first device past meter) must be service rated
4. Generators must be connected with a dedicated transfer switch. Breaker interlocks are not acceptable.
5. Portable generators may be connected to an inlet through a transfer switch.
6. Transfer switches that plug into the meter base are not acceptable.

Renewable Energy Connection Notes

Applies to: MS-501, MS-502, MS-507T, MS-553-1, MS-553-3, MS-554-1, MS-554-3, MS-41115, MS-41119

1. The solar and/or battery disconnect(s), if not mounted on an approved rack, shall be installed on the exterior of the building or approved structure in a location approved by Bluebonnet Electric Cooperative.
2. DG disconnect must be clearly labeled and identified.
3. Bluebonnet poles must remain free of structures and private attachments other than the meter loop assembly or riser.
4. Inspection may be required by local jurisdiction if applicable.
5. DG meter or equipment rack (If Applicable) shall be a minimum of 6’ away from Bluebonnet’s poles and/or equipment.
6. Any installation with Batteries are required to have an accessible disconnect or method of shutdown to disable batteries.

METER BASES

drawn:	approved:	date:	
JW	Standards	Jan. 30, 2024	-----

Notes:

1. This meter loop specification is good for the following voltages: 120/240, 120/208, 240/480 & 277/480. Please use MS–301 for straight 480 Delta applications only.
2. Bluebonnet Electric will supply ground rod.
3. On steel poles use a ⅜" X 1½" self tapping screw.
4. For your safety, only Bluebonnet personnel are authorized to install meter loops or other BEC equipment on a Bluebonnet pole. Members shall have loop assembled and available for installation by Bluebonnet.
5. See "Metering Guidelines" for all other applicable notes.

FOR SINGLE PHASE TRAFFIC CONTROL DEVICES:
200amp, 4 terminal, 1–phase, will require a lever by–pass meeting ANSI C12.7, UL 414, and NEMA 3R rating. Lever by–pass is only required for meter installations serving traffic control devices, including railroad, that need to remain functional at all times.

FOR THREE PHASE APPILCATIONS DESCRIPTION:
200amp, 7 terminal, 3–phase, 4–wire will require a lever by–pass meeting ANSI C12.7, UL 414, an NEMA 3R. Meter cans are available for purchase through Techline or any other electrical supplier provided it meets all Bluebonnet Electric Cooperative specifications.

Notes:

1. Line taps shall be made in the galvanized trough by the electrical contractor.
   No more than (2) conductors per phase shall be allowed.
2. No more than (2) risers will be connected per installation.
3. Wire sized to total disconnect sizes. (See Chart Below)
4. If secondary service exceeds (2) 2", 3", or 4" approved electrical metal conduit; BEC will install a primary underground transformer at member's expense.
5. Maintain 3"–6" distance between the disconnect and the meter can. Member shall use a metal nipple. A straight or offset nipple is acceptable.
6. #6 solid, bare ground copper wire and clamp attached to Bluebonnet's pole ground.
7. See "Metering Guidelines" for all other applicable notes.

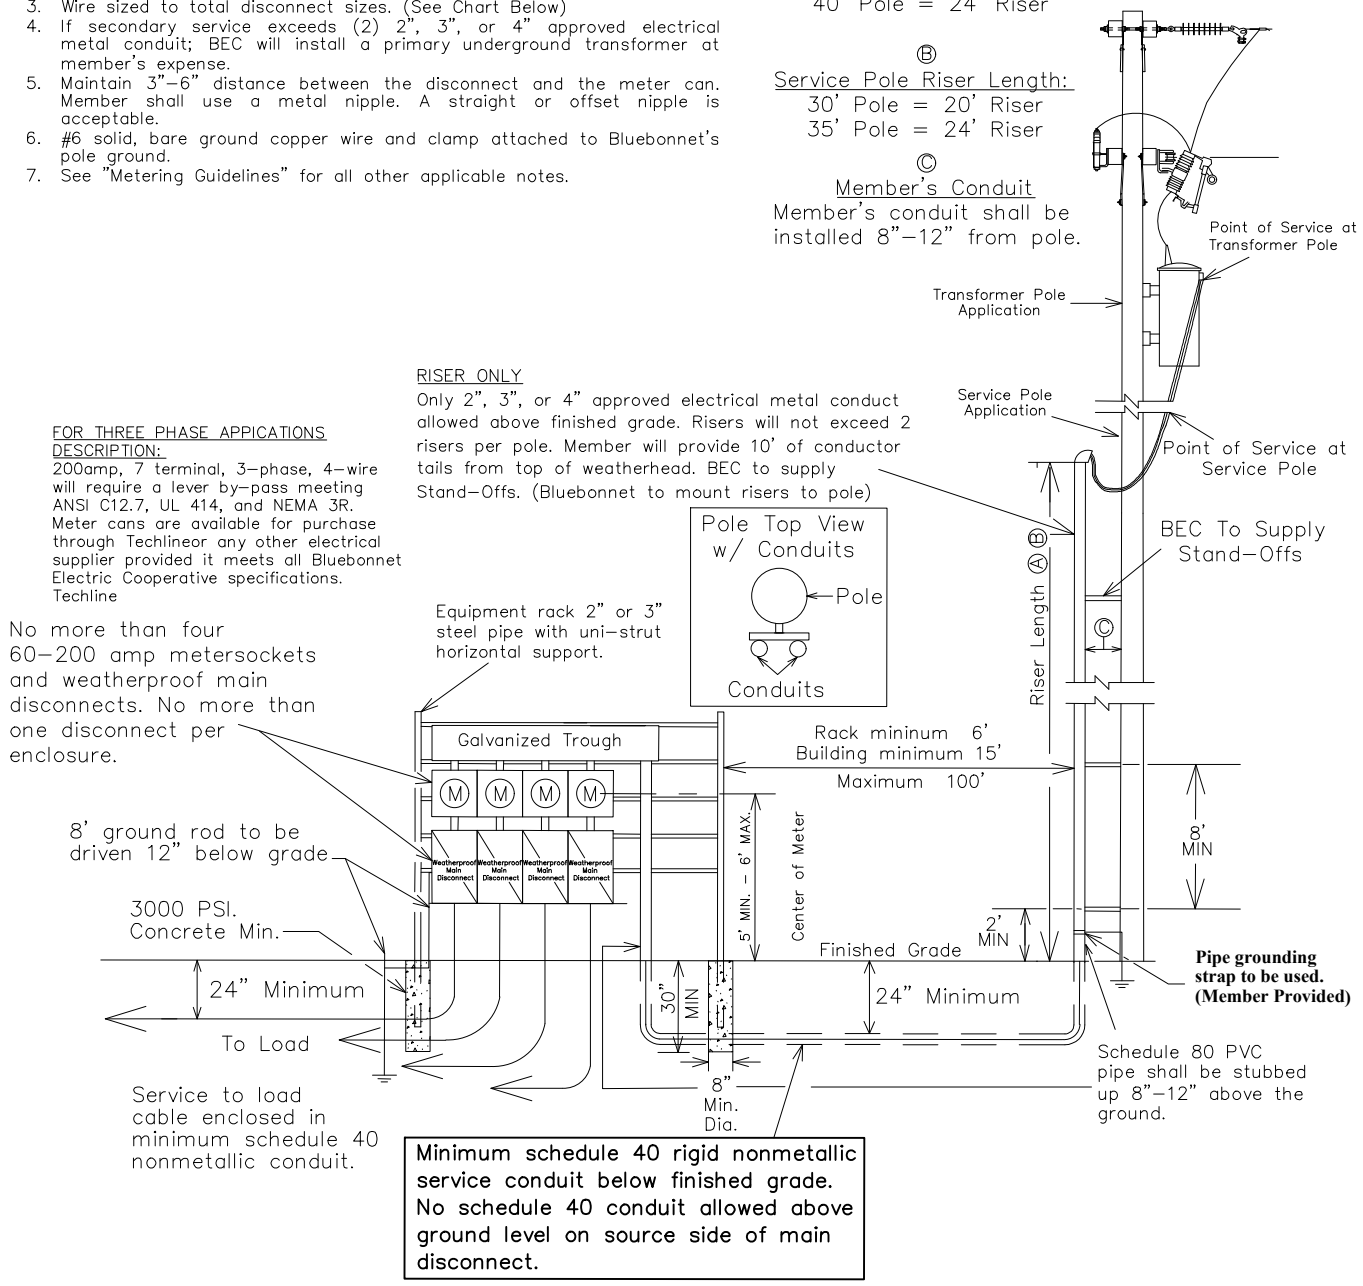
Ⓐ
Transformer Pole Riser Length:
35' Pole = 20' Riser
40' Pole = 24' Riser

Ⓑ
Service Pole Riser Length:
30' Pole = 20' Riser
35' Pole = 24' Riser

Ⓒ
Member's Conduit
Member's conduit shall be installed 8"–12" from pole.

FOR THREE PHASE APPICATIONS DESCRIPTION:
200amp, 7 terminal, 3–phase, 4–wire will require a lever by–pass meeting ANSI C12.7, UL 414, and NEMA 3R. Meter cans are available for purchase through Techlineor any other electrical supplier provided it meets all Bluebonnet Electric Cooperative specifications. Techline

RISER ONLY
Only 2", 3", or 4" approved electrical metal conduct allowed above finished grade. Risers will not exceed 2 risers per pole. Member will provide 10' of conductor tails from top of weatherhead. BEC to supply Stand–Offs. (Bluebonnet to mount risers to pole)



Minimum schedule 40 rigid nonmetallic service conduit below finished grade. No schedule 40 conduit allowed above ground level on source side of main disconnect.

CURRENT CARRYING CAPACITIES AND CONDUIT/NIPPLE SIZE REQUIREMENT OF STANDARD WIRE SIZE.

(RHH, RHW, THW, THWN, THHN, AND XHHW)

REFER TO NEC FOR OTHER CALCULATIONS.

COPPER CONDUCTOR

WIRE SIZE	BREAKER SIZE	CONDUIT/NIPPLE SIZE
#6	60 AMP	1¼" CONDUIT
#4	100 AMP	1¼" CONDUIT
#2	125 AMP	1½" CONDUIT
#1	150 AMP	2" CONDUIT
#2/0	200 AMP	2" CONDUIT

ALUMINUM CONDUCTOR

WIRE SIZE	BREAKER SIZE	CONDUIT/NIPPLE SIZE
#4	60 AMP	1¼" CONDUIT
#2	100 AMP	1¼" CONDUIT
#1/0	125 AMP	1½" CONDUIT
#2/0	150 AMP	2" CONDUIT
#4/0	200 AMP	2" CONDUIT

FOR THREE PHASE APPLICATIONS

DESCRIPTION:

200amp, 7 terminal, 3-phase, 4-wire will require a lever by-pass meeting ANSI C12.7, UL 414, and NEMA 3R. Meter cans are available for purchase through Techline or any other electrical supplier provided it meets all Bluebonnet Electric Cooperative specifications.

Notes:

1. #6 solid, bare ground copper wire and clamp attached to Bluebonnet's pole ground.
2. See "Metering Guidelines" for all other applicable notes.

Ⓐ Riser Length:

35' Pole = 20' Riser

40' Pole = 24' Riser

Drawn By :	Checked By :	Approved By :
DJ	Engineering	Standards
Scale : NONE	Date : 06-27-2023	MS-106A

Notes:

1. Main disconnect panel may not be used as an electrical race way.
2. Any combination of six disconnects totaling no more than 400 amp. REF. NEC, SEC. 230.71.
3. A galvanized trough will have to be used if more than two disconnects are installed. Line taps shall be made by the electrical contractor.
4. Reference NEC SEC. 230.9 (A) for meter clearances that state three feet from opening.
5. All services entering the meter can from a riser will be top fed.
6. Only 400 amp meter can is allowed. 320 amp meter cans are not allowed.
7. A detailed load sheet shall be filled and returned to Bluebonnet before the service will be connected.
8. No wires shall run in the center of the can. (Due to the clearance needed to set the meter.)
9. Largest wire to be pulled in to the meter can is 500 MCM Copper.
10. All service wires entering the meter can (Top or Bottom Feed) will be terminated at the closest lugs. No phase conductors shall be run through the center of the meter can.
11. See "Metering Guidelines" for all other applicable notes.

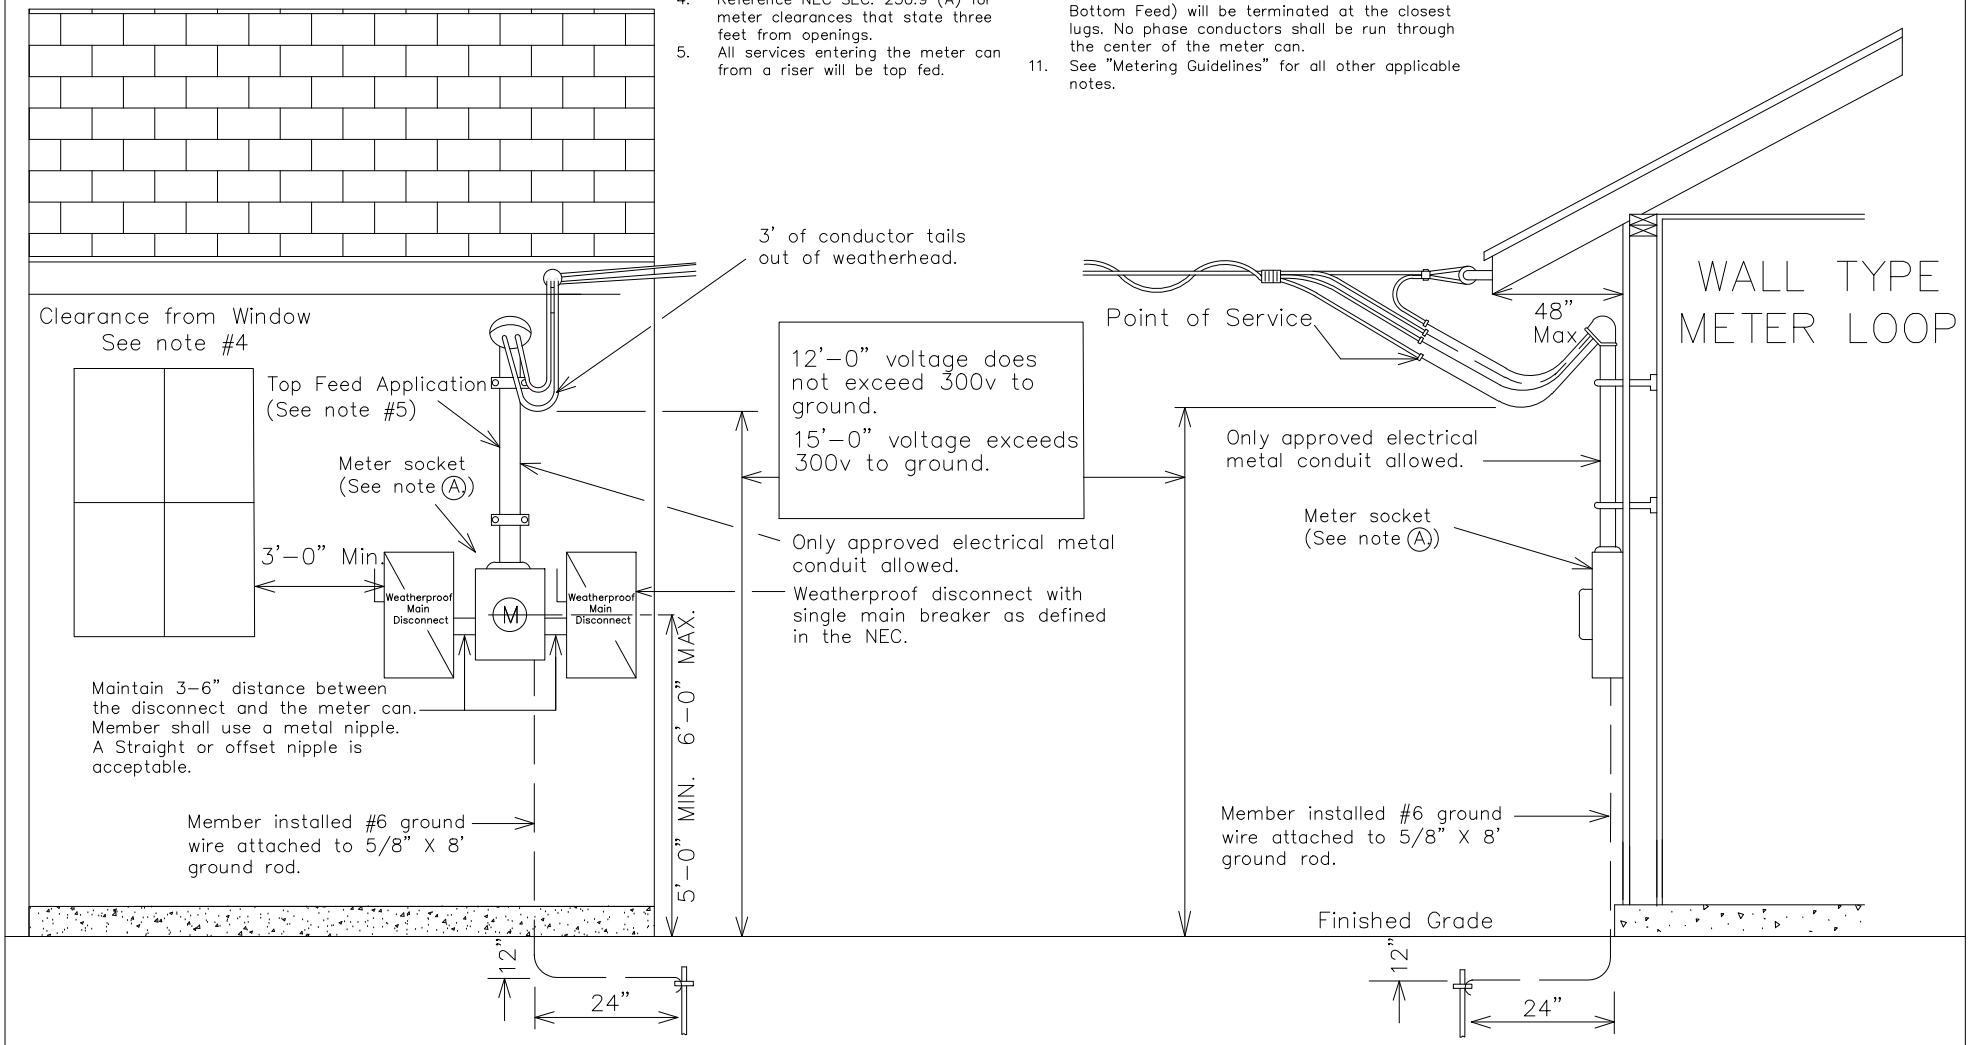
Notes:

1. Main disconnect panel may not be used as an electrical race way.
2. Any combination of six disconnects totaling no more than 400 amp. REF. NEC, SEC. 230.71.
3. A galvanized trough will have to be used if more than two disconnects are installed. Line taps shall be made by the electrical contractor.
4. Reference NEC SEC. 230.9 (A) for meter clearances that state three feet from openings.
5. All services entering the meter can from a riser will be top fed.
6. Only 400 amp meter can is allowed. 320 amp meter cans are not allowed.
7. A detailed load sheet shall be filled out and returned to Bluebonnet before this service will be connected.
8. No wires shall run in the center of the can. (Due to the clearance needed to set the meter.)
9. Largest wire to be pulled in to the meter can is 500 MCM Copper.
10. All service wires entering the meter can (Top or Bottom Feed) will be terminated at the closest lugs. No phase conductors shall be run through the center of the meter can.
11. See "Metering Guidelines" for all other applicable notes.

(A) Type K-4, Bolt-in Type Meter Can

Description: 400 amp, 4 terminals, 3 wire, residential/commercial socket singlephase self-contained, large coverplate. These meter cans are available for purchase through Techline or any other electrical supplier provided it meets all Bluebonnet Electric Cooperative specifications.



Bluebonnet	1Ø 400 AMP SERVICE WITH METER LOOP ON BUILDING – WALL TYPE	Drawn By : RG	Checked By : MS COMMITTEE	Approved By : MS COMMITTEE
DATE: 11-04-2021	REVISIONS: Added Main Breaker Note	Scale : NONE	Date: 11-04-2021	MS-107WT

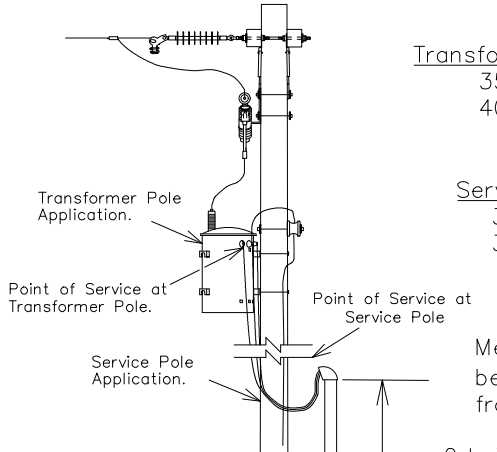
Notes:

1. Main disconnect panel may not be used as an electrical race way.
2. Line taps shall be made by the electrical contractor if a galvanized wiring trough is used.
3. Any combination of six disconnects totaling no more than 400 amp can be used. REF. NEC, SEC. 230.71
4. If more than two disconnects are needed a galvanized trough is required.
5. #6 solid, bare ground copper wire and clamp attached to Bluebonnet's pole ground
6. If secondary service exceeds 1–3" (or 2–2") galvanized metal conduit, BEC will install a primary underground transformer at member's expense.
7. All service wires entering the meter can (Top or Bottom Feed) will be terminated at the closest lugs. No phase conductors shall be run through the center of the meter can.
8. Only 400 amp meter cans are allowed. No 320 amp meter cans are allowed.
9. Member shall use a metal nipple.
10. Largest wire to be pulled in to the meter can is 500 MCM Copper.
11. All service wires entering the meter can (Top or Bottom Feed) will be terminated at the closest lugs. No phase conductors shall be run through the center of the meter can.
12. A detailed load sheet shall be filled out and returned to Bluebonnet before the service will be connected.
13. Maintain 3"–6" distance between the disconnect and the meter can. Member shall use a metal nipple. A straight or offset nipple is acceptable.
14. See "Metering Guidelines" for all other applicable notes.

Ⓐ
Transformer Pole Riser Length:
35' Pole = 20' Riser
40' Pole = 24' Riser

Ⓑ
Service Pole Riser Length:
30' Pole = 20' Riser
35' Pole = 24' Riser

Ⓒ
Member's Conduit
Member's conduit shall be installed 8"–12" from pole.



BEC To Supply Stand–Offs

Only 3" (or 2– 2") approved electrical metal conduit allowed. Riser w/stand–off brackets and 10' of conductor tails. (Bluebonnet to mount riser to pole).

8 FT. Min.

Schedule 80 PVC pipe shall be stubbed up 8"–12" above the ground.

Riser Length Ⓐ Ⓑ

Rack installation only.
Minimum 6'
Maximum 100'

Pipe grounding strap to be used. (Member Provided)

2 FT. Min.

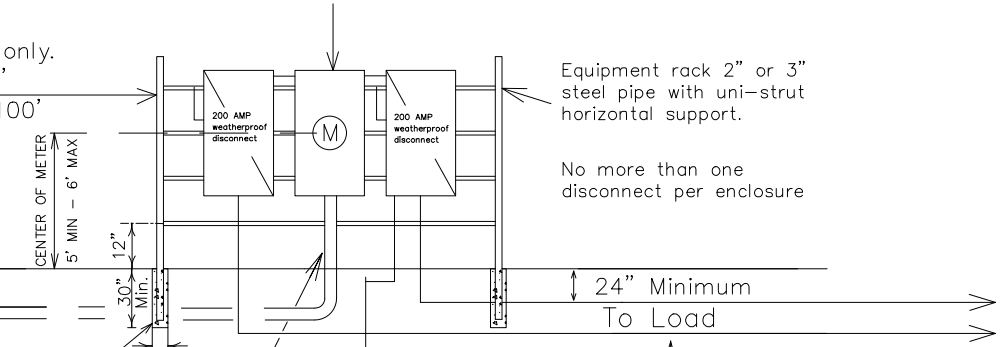
Finished Grade

24" Minimum

Schedule 80 PVC pipe shall be used above the ground.

Minimum schedule 40 rigid nonmetallic service conduit below finished grade. No schedule 40 conduit allowed above ground level on source side of main disconnect.

Type K–4, Bolt–in type meter can:
Description: 400 amp, 4 terminals, 3–wire, residential/commercial socket single phase self–contained, large cover plate. These meter cans are available for purchase through Techline or any other electrical supplier provided it meets all Bluebonnet Electric Cooperative specifications.



Equipment rack 2" or 3" steel pipe with uni–strut horizontal support.

No more than one disconnect per enclosure

24" Minimum To Load

3000psi Conc. Min.

8" Min. Dia.

Service to load minimum schedule 40 nonmetallic conduit.

Schedule 80 PVC pipe shall be used above the ground.

8' ground rod to be driven 12" below grade. (Member to provide ground rod.)

Scale : NONE	Date : 11-04-2021	MS-203

Notes:

1. Line taps shall be made in the galvanized trough by the electrical contractor.
2. Two disconnects could be substituted with (1) disconnect. All disconnects shall have over current protection.
3. Member shall contact Bluebonnet Electric to determine the secondary conduit location. Conduit to be installed 36" to the side of transformer. Call 800–842–7708 to schedule an appointment.
4. Bluebonnet will complete wiring into transformer. Have sufficient amount of wire for termination. Member shall install an additional 10' of wire for termination
5. Member/Electrician shall coordinate with Bluebonnet personal to install all conduit and the pulling of the secondary wire to the transformer. Member/Electrician shall notify Bluebonnet 48 hours in advance to schedule a time/date to perform the work.
6. If additional trips are made to the site by Bluebonnet personnel, applicable fees may be applied.
7. Maintain 3"–6" distance between the disconnect and the meter can. Member shall use a metal nipple. A straight or offset nipple is acceptable.
8. See "Metering Guidelines" for other applicable notes.
